

Ultimation

Omnisation may cause setback in transcension due to other species not being as advanced in their transcensional process.

MAJOR ASTRONIST MECHANISM 1: THE ASTROESCHATOLOGY & THE ASTROSOTERIOLOGY OF ALL HUMANKIND

Some keywords

Twilightide: the crossroads between transcension and degradation.

Sideria: the closure of the window of scope to transcension, leading to humanity's devolution.

Transcension: a process of salvation by means of the astronomical world.

Ceaseria: the end of The Cosmos, typically by some violent, drastic means.

Crepusculis: human infighting caused by lack of resources and devolution.

Starfall: the extinction of the human species due to its aversion to transcension.

Degradation: the overall process of the decline of the human species caused by the choice of Evenfall or by inaction before the Sideria occurs.

Koryfication: the peak condition of humanity, thus requiring omnisation — the spread of Astronism among other scoped species — so for that species may attain the Ultimation.

Ceaseria
Great Tumefaction
Comet of death
Undisclosure
Sideria

Mobilisation

Twilightide

Supersedence of man

Astronism's placement of man

Enkindlement

Comet of life

The Degradation

Evenfall

A possibility exists for a reset to the placement of man in order to choose again at Twilightide if Sideria has not occurred.

Devolution of man

By means of scope

If the comet of death event imminently occurs.

Crepusculis

The possibility of a Rescope (due to the original preferment)

Starfall

Views on humanity's current condition

- Terarchianism: humanity is coming dangerously close to Sideria (the closing of the scope window).
- Astronist orthodoxy: humanity has yet to overcome the choices at Twilightide because the placement of man is yet to be completed.
- Analepticism: humanity has already overcome the choices at Twilightide and so, the elevation of man has already begun.
- Prolepticism: humanity has already chosen Evenfall yet still remains redeemable by astronality and scope.
